PROFILE

I'm a Computer Engineer who works where hardware meets software — ESP32 firmware and PCBs on one side, production React and brand systems on the other. I think from the silicon up and care about the surface: powerful under the hood, calm on top.

SKILLS

Embedded: ESP32, Arduino, PIC MCU, FPGA / Verilog, PCB Design, Firmware

Frontend: React, TypeScript, Tailwind CSS, Flutter, HTML / CSS / JS, Responsive Design

Design: Figma, Canva, Google Stitch, Adobe Photoshop, Illustrator, UI / UX

Tools & Backend: Python, C / C++, Git, Firebase, SQL, Node.js

SELECTED WORK

Stormfresh — Poultry ERP

2026

One of five engineers. I owned the management dashboard, reporting layer, Postgres role rules, and the app's interface language. Gain, balance, and trend figures are calculated from source records; management permissions are enforced in Postgres rather than only in the interface.

Flux

2026

I implemented contrast checks for the brand palette, fixture-driven prelaunch screens, and the companion app's navigation system. The recorded web suite covers 19 contrast pairs and 235 tests across 35 files; the mobile interface uses six font sizes instead of sixteen.

SHM — Structural Health Monitoring

2026

The engineering work connects three sensor readings to a per-node dashboard and a clear safe/unsafe alert state. See the sensor-node dashboard and case study on the portfolio.

EXPERIENCE & EDUCATION

BS Computer Engineering

2022 — 2026

Jose Rizal Memorial State University

Lead software engineer on our IoT-based thesis, and Vice President for External Affairs of ICpEP.SE.

SaaS Frontend Developer & Designer

Freelance

Self-employed

Build and design responsive SaaS web frontends for clients — UI/UX, design systems, and production React.

SELECTED RECOGNITION

Google Cloud Gen AI Academy APAC 2026 — Cohort 3 — Google Cloud · Hack2skill · Champion — Regional Programming Competition (C++) — ICpEP.SE
